

## USB Version LMK4

The new version of LMK4+ is equipped with an additional USB interface. Compared to the user's manual one of the two Midi Out 1 sockets and one of the two Midi Out 2 sockets have been replaced by an USB socket. This causes no significant limitation as the Midi out sockets of the former version were simply connected by pairs. The USB output transmits the same data as Midi Out 1 ("Midi over USB"). It is not possible to power the unit via USB because of the required supply current !
